

- **Mixture Of Botanical Oils**
- **Kills Mounds With One Application**
- **One Gallon Makes Up To 21 Gallons**
- **Pleasant Smelling Solution**
- **Kills Fire Ants and Other Ants**

In the late 1930's, the red imported fire ant, *Solenopsis Invicta Buren* arrived in the United States from South America. Today these rapidly multiplying stinging pests have infested over 300 million acres in Alabama, Arkansas, California, Florida, Georgia, Louisiana, Mississippi, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas and Virginia. One queen can lay 200 to 2,000 eggs per day. Fire ants are notorious for their aggressiveness and burning stings.

**Nature's Creation Fire Ant Killer Mound Drench** uses a combination of natural ingredients including Rosemary Oil, Mineral Oil and Wintergreen Oil. This mixture works quickly before the queen can be moved by her worker ants to start a new colony.

Directions: Shake well before mixing. Add 6 oz. to 8 oz. of **Nature's Creation Fire Ant Killer Mound Drench** to one gallon of water in a watering can. Soak the mound completely. Make certain that all visible tunnel openings are filled. Do not miss tunnels located around the perimeter of the mound. Loose surface soil on larger mounds can absorb much of the solution before it can penetrate to the colony. An additional application may be required. Use at least one gallon of solution for very large mounds. Smaller mounds will require less.
