

Natural

40 lb.
NC153

- Contains Alfalfa
- Slow Release Nitrogen
- No Bio-Solids or Manures
- Dried Cane Molasses
- Non-Burning
- Eleven Strains of Mycorrhizal Fungi
- Kid and Pet Friendly

Nature's Creation® Premium Lawn and Garden Fertilizer 6-1-2 with Mycorrhizal Fungi is an all natural, pleasant smelling plant food that provides exceptional results on all lawn grasses, roses, vegetable gardens, annuals, perennials, trees and shrubs. After water is applied, the uniform pellets expand and break-down to release their nutrition content to feed hungry plants and naturally occurring beneficial soil microorganisms. The soil microorganisms then grow and thrive to process organic matter present in the soil into elemental nutrient compounds that are readily absorbed by plant roots.

Take a Look at Our Amazing Ingredients:

- Cottonseed Meal
- Sunflower Meal
- Alfalfa Meal
- Soybean Meal
- Dried Cane Molasse
- Rice Bran
- Corn Gluten Meal
- Soybean Oil
- Magnesium Mica
- Iron Sulfate
- Diatomaceous Earth
- Langbeinite
- Sulfur

Plus three easily absorbed amino acid complexes: Iron Ami-

no Acid Complex, Zinc Amino Acid Complex and Manganese Amino Acid Complex. Just like in human nutrition, amino acid complexes are easily utilized by plants and the microorganisms living in the soil.

The formula contains no manures or animal byproducts of any kind.

Why Add Mycorrhizal Fungi?

Mycorrhiza is the word used by scientists to describe the relationship between a fungi and the roots of a plant. The term mycorrhiza literally means fungus root. Our fertilizer contains 11 different strains. They are arbuscular mycorrhizal fungi that multiply and form a symbiotic relationship with the roots of the host plant. The benefits they provide to the host plants include: increased nutrient uptake, drought tolerance and disease resistance.
